

Pottery at Aberdoon

Pottery at Aberdoon was designed to provide opportunities to participate in producing pottery that will be created by use of a variety of media and tools. The participants will use inclusive techniques that assist in making choices of colour, media and positioning of elements to create works. It aids in fine motor skill with the different techniques and tools used to create works. They will learn simple hand building techniques, decoration, stamping, glazing and works will be kiln fired with beautiful colours. It is a hands on program with sensory benefits that invites clients to enjoy a social environment whilst creating pieces based on individual abilities.
